Subject: RE: TRI Data Quality -- Coal facilities

Good afternoon,

We will be contacting these 7 electric utilities regarding their coal consumption and chemical/metal composition. After identifying the coal source and type for most of the facilities, we determined metals/chemicals that were below threshold. We were not able to find information for the Colorado Springs Ray Nixon Power Plant. We will be contacting this facility for hydrochloric acid, but have not been able to further calculate threshold.

Facility	TRIFID	RY	chemical
BONANZA POWER PLANT	84078BNNZP12500	2017	cobalt
COAL CREEK STATION	58576GRTRV28753	2017	Beryllium

Subject: RE: TRI Data Quality -- Coal facilities

Thanks, and yes, please let me and Martin know which facilities you will be contacting. I assume the CDR requires the facilities to report the TRI constituents (and concentrations) they think are present in their coal ash?

Subject: TRI Data Quality -- Coal facilities

Carl,
For the current TRI Data Quality, the headquarters program office is looking at facilities that reported to the CDR under TSCA, but did not report to TRI.

There were 27 facilities identified assigned to R8 for review. Suzanne Satter identified facilities that closed. Currently, Suzanne and I are verifying the coal consumption quantities and coal source to identify if a facility is below threshold for reporting. We are currently doing the calculations, and have not yet determined which facilities from the list below will be contacted. I will provide you with updates and let you know which facilities will be contacted.

Data Quality code narrative: Facility reported coal ash to CDR. It appears your facility exceeded reporting threshold for the chemicals listed but NOT reported to TRI for reporting years 2011 or 2012 or 2013 or 2014 or 2015 or 2017.
